

Data Sheet - cctvXANPRL1te System

1 - 2 Channel ANPR (Auto Number Plate Recognition System)

Main features

- Neural Net ANPR system
- Intuitive site set up facility
- RS-232 searchable text overlay to DVR option
- Standalone operation PC based recording
- Hot Plate feature
- 1 or 2 Channel option with Overview camera
- Barrier contact output (optional)
- Intelligent search function
- Multi user operation
- Event log
- Remote diagnostics & upgrade facility
- Monitor, Mouse, Keyboard and UPS included
- Works with CCTVX & other ANPR cameras

Applications

- Petrol Stations
- Car Park control and management schemes
- Hotels
- Industrial estates
- Leisure complexes and golf clubs
- Traffic Management
- Repossession management systems

The **cctvXANPRL1te** represents the very latest in PC based ANPR technology providing rock solid stability and image quality as well as super high accuracy ANPR (Automatic Licence Number Plate Recognition) at a very affordable price. System includes PC, Monitor, Keyboard and UPS.

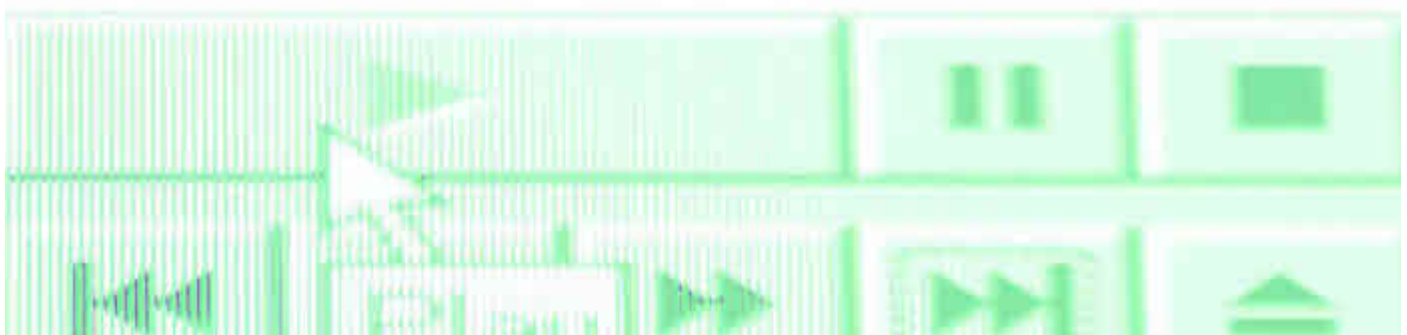

This this system gives you the best of both worlds by giving you a very accurate Neural Net based ANPR engine, together with the features that you need to run a cost effective ANPR system, including an RS-232 text overlay link to one of our Premium Range DVR's proving live video images with searchable number plate text. The system works with cctvX and other ANPR cameras

The number plates it recognises can be stored along with a picture of the plate (and an overhead camera in the database). This data recorded on the internal Hard Disk Drive can be used to find number plates, flag up 'Hot Plates'. It is very simple to export the data in a simple *.csv data format for use outside of the system.

The system provides a very high reading accuracy whether you are on a roadside location or managing a car park, it also can be used for number plate recognition barrier opening offered as an optional extra.

The whole system is then further enhanced by the use of remote monitoring software, meaning pictures can be viewed and the system programmed in remote locations using a web browser, as well as site adjustments and software upgrades.

Full installer / Distributor customisation are also available.
