

Data Sheet - cctvXANPR System

1 - 4 Channel ANPR (Auto Number Plate Recognition System with database & alarms)

Main features

- Fully functional scene setup
- Neural Net ANPR system
- Intuitive Site set up facility
- Standalone or multi site (network) operation
- Hot Plate & Frequency Violation features
- RS-232 searchable text overlay to DVR options
- Barrier contact output (optional)
- Intelligent search function
- Multi user operation
- 2 Year Warranty
- Remote diagnostics/upgrade facility, event log
- Dot Matrix interface output (optional)
- Monitor, Mouse, Keyboard and UPS included

The **cctvXANPR** represents the very latest in PC based ANPR technology providing rock solid stability and image quality as well as super high accuracy ANPR (Automatic Licence Number Plate Recognition) System.

This feature rich platform gives access to performance previously unheard of as this price point and could be seen as the engine at the heart of any professional CCTV surveillance system, working with specialist cctvX or other ANPR cameras

The ANPR is based on a Neural net design quickly learning to read number plates of all types and languages from the position the camera is in relation to the road and vehicle it is viewing, through the use of local training if required.

The data it recognises can be stored along with pictures of the plate and an overhead camera in the database. This data recorded on the internal Hard Disk Drive can be used to find number plates, flag up 'Hot Plates' as well as flag up frequent visit violations either on a single unit or across a client server structure. Equally it is very simple to export the data in a simple *.csv data format.

The system provides a very high reading accuracy whether you are on a roadside location or managing a car park, it also can be used for number plate recognition barrier opening, or an optional LED dot matrix display board Package (extra).

The whole system is then further enhanced by the use of remote monitoring software, that means pictures can be viewed and the system programmed in remote locations using a web browser, as well as site adjustments and software upgrades from a remote location.

Full installer / Distributor customisation available on the front end screen, please contact us for more details.

Applications

- Roadside enforcement
- Car Park control and management schemes
- Hotels, leisure complexes and golf clubs
- Industrial estates
- Town centre parking schemes
- Repossession management schemes
- Frequency violations to refuse sites
